New Product Announcement

November 1, 2009

New Billet Accessories for the Jeep Wrangler JK

RealWheels Corporation has just announced the release of additional products into their line of over 50 Jeep vehicle enhancement accessories. The new product designs were the result of numerous meetings with Jeep owners and enthusiasts at events throughout the past year. New products include an attractive billet pedal set with a very aggressive grip for off-road driving. A matching foot rest has also been added, for use when the driver removes the front doors. This cruising-style foot peg keeps the driver's foot from scratching the doorsill and provides for a comfortable ride. A new shift knob design is a noticeable improvement over the factory plastic and offers a greatly improved feel in the driver's hand. A new solid stainless steel windshield light bracket provides Jeeps with a machined-style mounting location for accessory lights.
